WIRELESS SINGAPORE

THIS WEEK'S TOPIC
How can the proposed nationwide wireless broadband network benefit your organisation, and you personally?
Is there more that can be done to make it even better?

INFORMATION technology is integral to the educational and research activities of SMU. We have a wireless campus and many of our faculty, students, and staff also have wireless capabilities at home but not elsewhere. Turning Singapore into a wireless "hot zone" will greatly improve accessibility for all members of the SMU community and will expand the opportunities for collaborative work, whether on research projects, CCAs, or other University activities. It's a great idea for Singapore and will be a model for other cities.
